

UPR ULTRALIGHT PLATE RACK

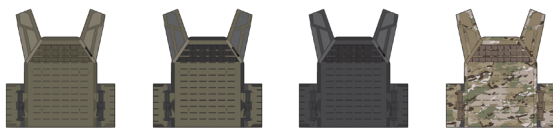

The PROJECT7 **ULTRALIGHT PLATE RACK** (UPR) is a minimal coverage platform built for operators who want only hard armor coverage with no scalability. UPR is a specialty armor plate rack designed to be as light and compact as possible, making it ideal for missions like aerial platform, maritime assault, vertical access, or linear assault. UPR is a “hard armor only” design that utilizes only hard armor for torso protection and does not incorporate soft armor for side and extremities protection.

KEYFEATURES

Key features for **UPR** include:

- Ultralight and compact design for high velocity operations, or those requiring the broadest possible range of motion
- PROJECT7's “Structured-Texture” shoulder design provides a soft, natural, and high friction shooting platform unencumbered by buckles, straps, external pads, or overlapping armor
- Patent pending Ultralight Three-Piece Cummerbund (3PC-UL) non-ballistic design for minimal weight, maximal comfort, and stable load bearing surfaces, as well as operator specific sizing, broad adjustability, and rotational flexibility for unrestrained movement
- SAPI based platform sizing to scale hard armor coverage to the individual operator and provide greater protection for larger operators
- Webless or Traditional MOLLE/PALS load bearing surfaces
- Bar tacked anchors for the installation of PROJECT7 ILB Packs and 1PS Single Point Slings
- First-Spear Tubes closure system for secure closure and rapid donning and doffing
- User replaceable cummerbund elastic
- Available in Medium, Large, and X-Large platform sizes with eight different cummerbund sizes to ensure perfect fit
